

# MEASURING GUIDE FOR CUSTOM RIDING BOOTS

FOR THIS GUIDE YOU WILL NEED

A fabric tape measure

Your normal riding pants & socks

And a helping hand

## Getting your correct leg height

Fig. 1.0

Slightly bent leg

- Measure height with a slightly bent leg
- Measure from the crease of the knee to the heel of the foot.
- Know that the boots will drop so make sure to measure to the crease

## Getting Your Calf Size right

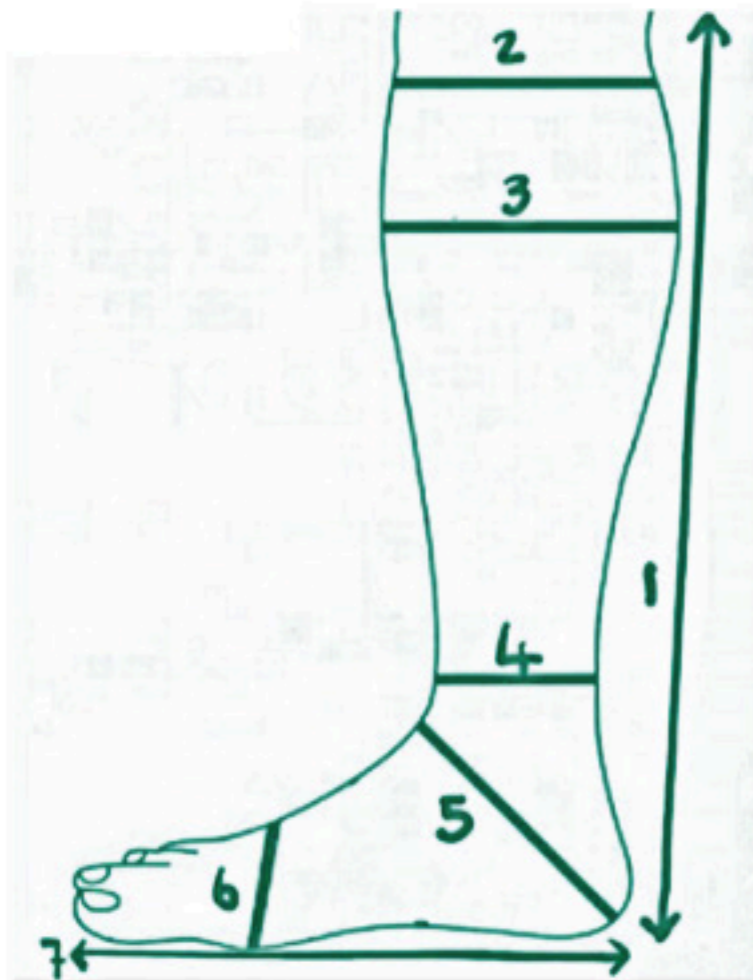

Fig. 1.1

Straight leg

- Measure the widest part of your calf.
- Slide down the measuring tape to find the widest part of your leg.
- Do this for both legs as they may differ!

## Measuring guide for custom riding boots

- 1 - Measure height from heel to below the knee.
  - 2 - Measure top leg circumference just below the knee bend.
  - 3 - Measure calf circumference on the widest part of the leg
  - 4 - Measure ankle circumference 5cm up above the ankle bone.
  - 5 - Measure circumference around the bridge.
  - 6 - Measure foot width on top from side to side on the widest part of the foot.
  - 7 - Measure foot length from heel to the biggest toe.
- i) Measure height distance from measurement 2 to measurement 3.
  - ii) Measure height distance from measurement 3 to measurement 4.
  - iii) List your normal SA/UK shoe size.

**NB:** Please all measurements to be done in standing position.

- Make sure to double-check measurements to ensure accuracy.
- Please make sure you measure same positions on both legs to avoid confusion
- It is always recommended to measure more than once.
